COMICE topline cables

COMICE SILVER INTERCONNECT

Proven science and technology help make Comice Cables the sound quality leaders.

COMICE SPEAKER CABLE

Made in the U.S.A. with unsurpassed quality.

From modest audio installs to multi-hundred thousand dollar show vehicles, Comice Car Audio Cables will bring any system to life.

COMICE POWER CABLE

Hear what people have to say:

"I couldn't believe what a huge improvement these cables made in my system. Everything got cleaner and clearer and the soundstage really improved. Now I understand that cables are really just as important as any other component... When my girlfriend heard my system for the first time after replacing the cables she actually asked me if I had changed something. I hadn't even told her about the cables yet!"

COMICE SILVER INTERCONNECT

Without high fidelity car audio cables, the performance of a vehicle's sound system will be limited. The technologically advanced Comice Silver Interconnect addresses this issue head-on. With fully annealed pure silver conductors, Teflon dielectric and Teflon air tubes, crystal clear signal transfer is assured. Twisted pair construction and a 100% RFI coverage directionally drained shield, keep noise out. Add the fact that the Comice Silver Interconnect is the world's first car audio cable to feature TriboDead triboelectric noise reduction technology, (enabling a dramatic reduction in vibration induced noise) and you have a truly unique cable. Featuring German made WBT locking connectors, and individually serialized cables; you will not find a better car audio interconnect.

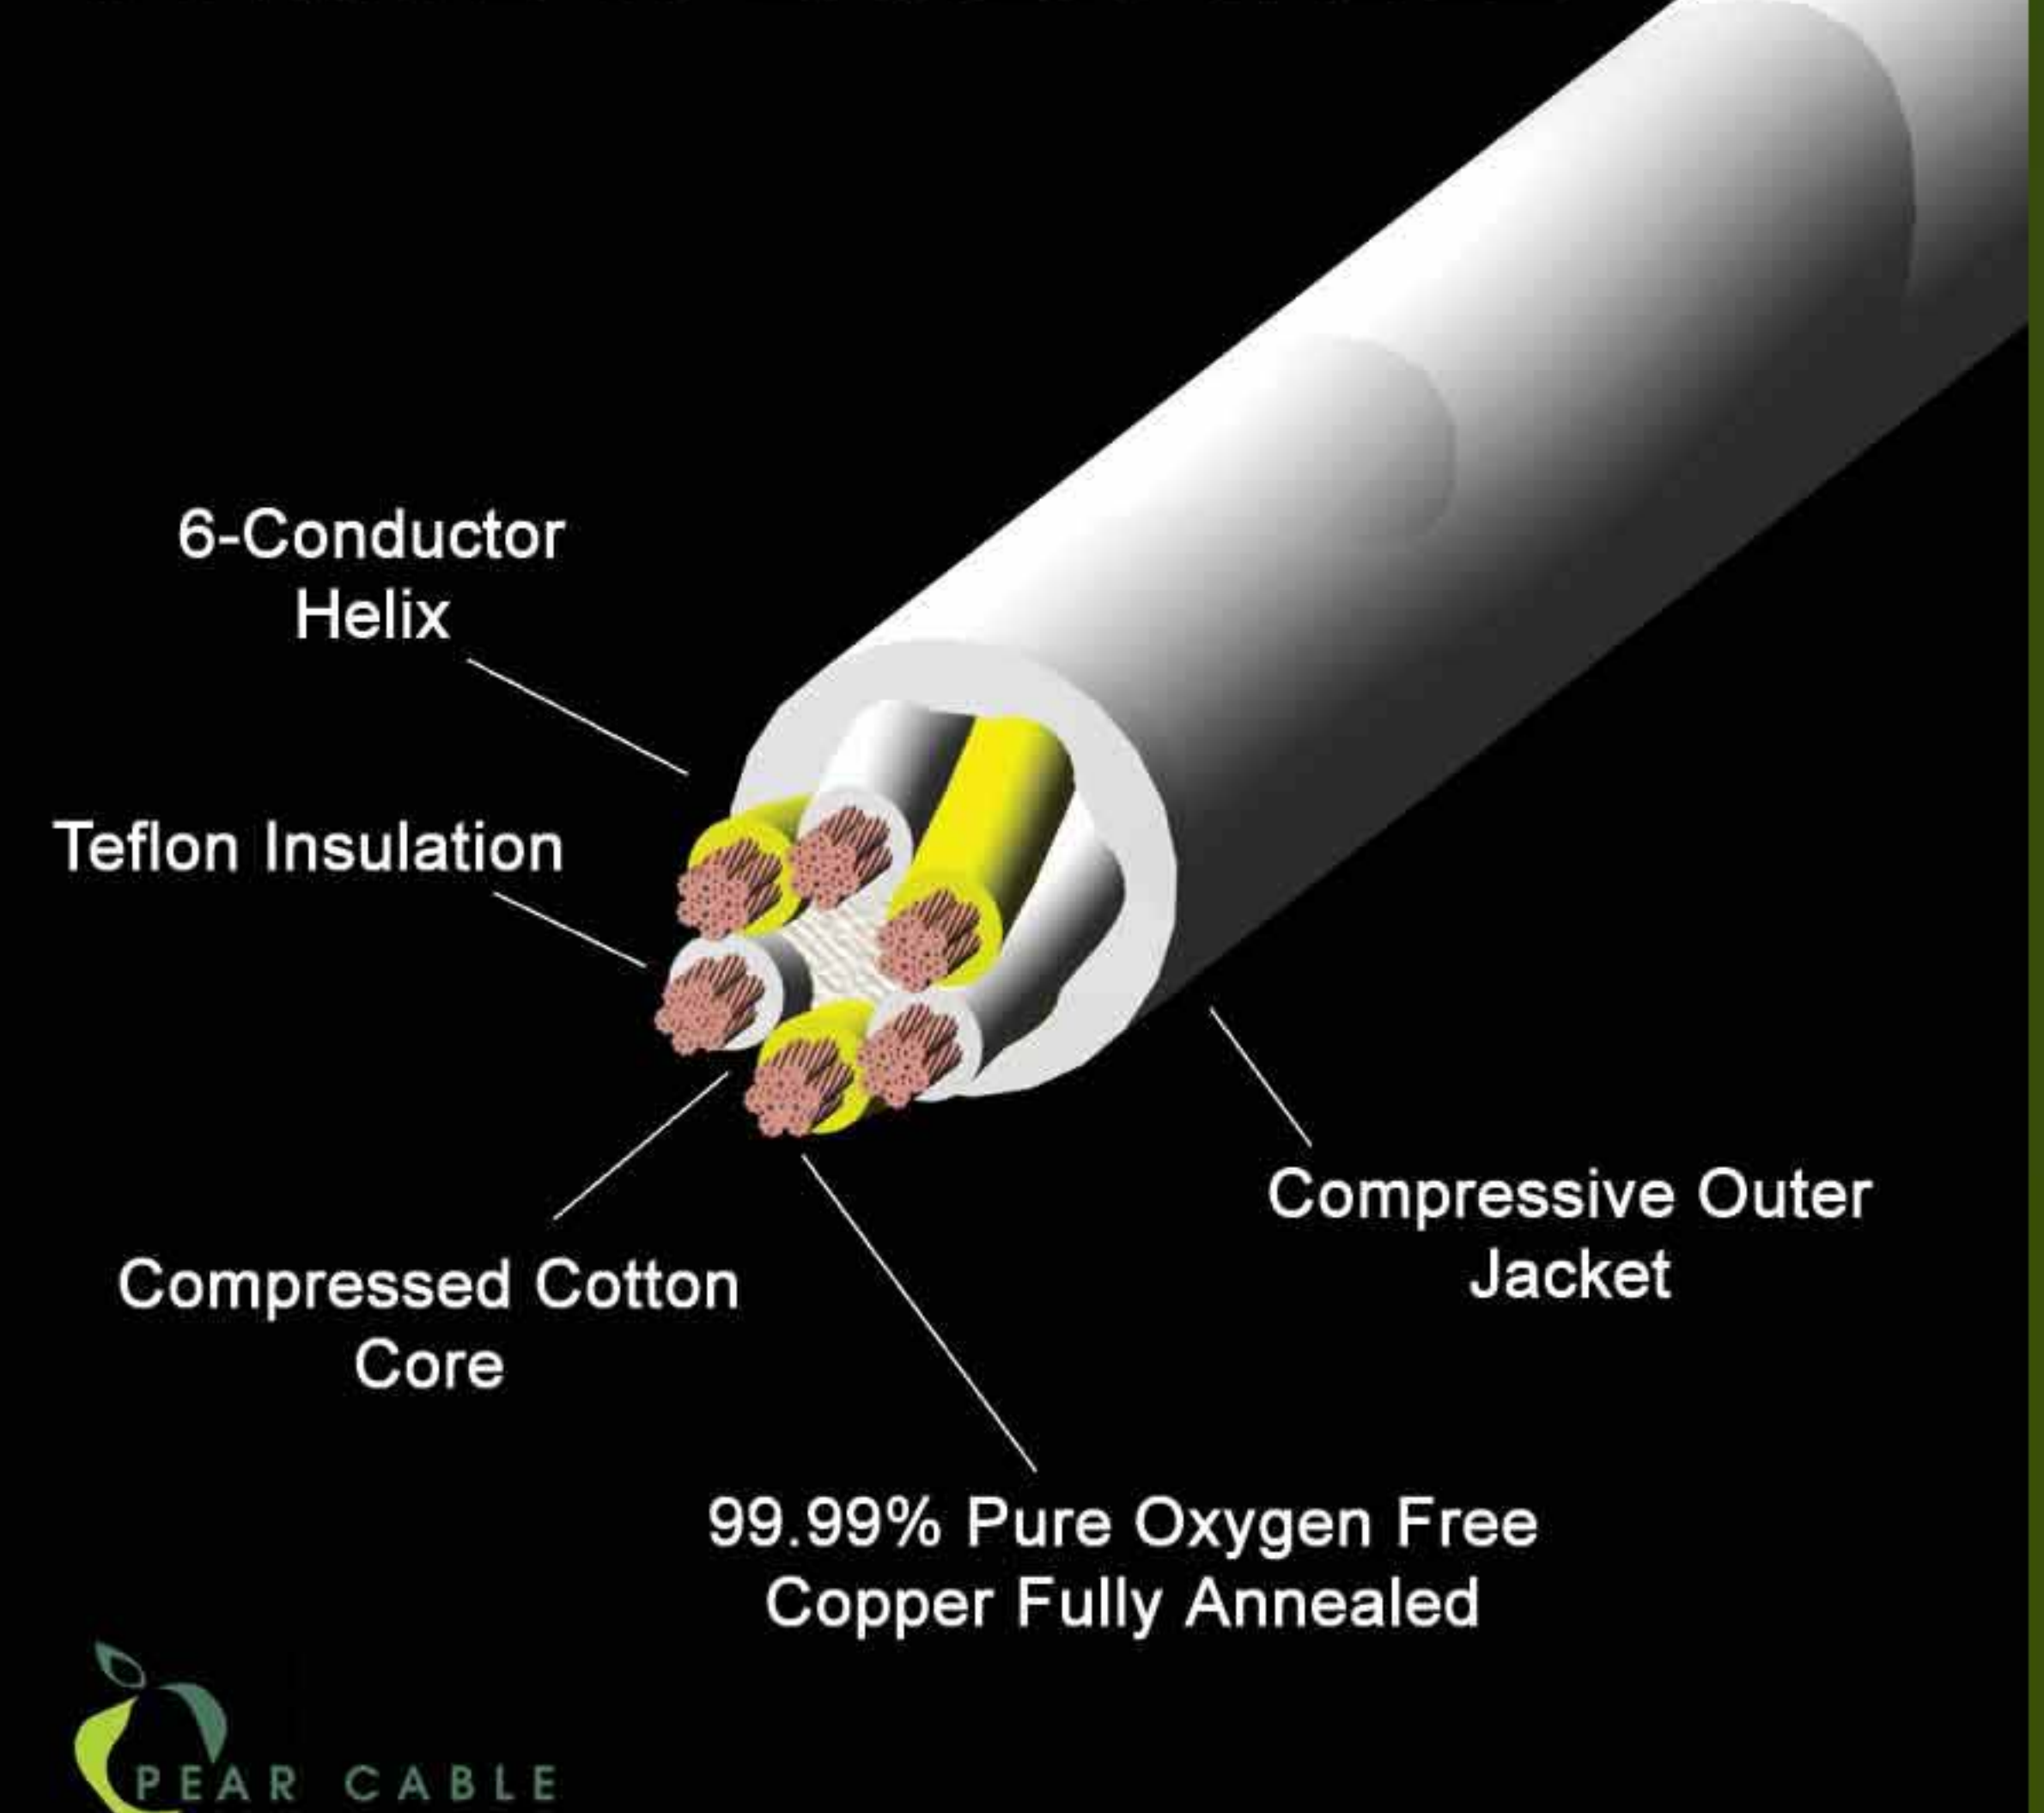

COMICE SILVER INTERCONNECT

COMICE SPEAKER CABLE

An audio system is limited by its weakest link. In order to maintain a high fidelity car audio signal, high quality speaker wire is essential. The Comice Speaker Cable is a revolutionary cable that utilizes a 6-conductor helix to make it one of the most accurate car audio speaker cables on the market. Both the design and the materials enable this cable to achieve inductance fully 3 times lower than any of the competition. A compressed cotton core and a compressive outer jacket create a mechanical resonance control system that ensures tight and accurate bass. Finally, with superior noise rejection, the Comice Speaker Cable is in a class by itself.

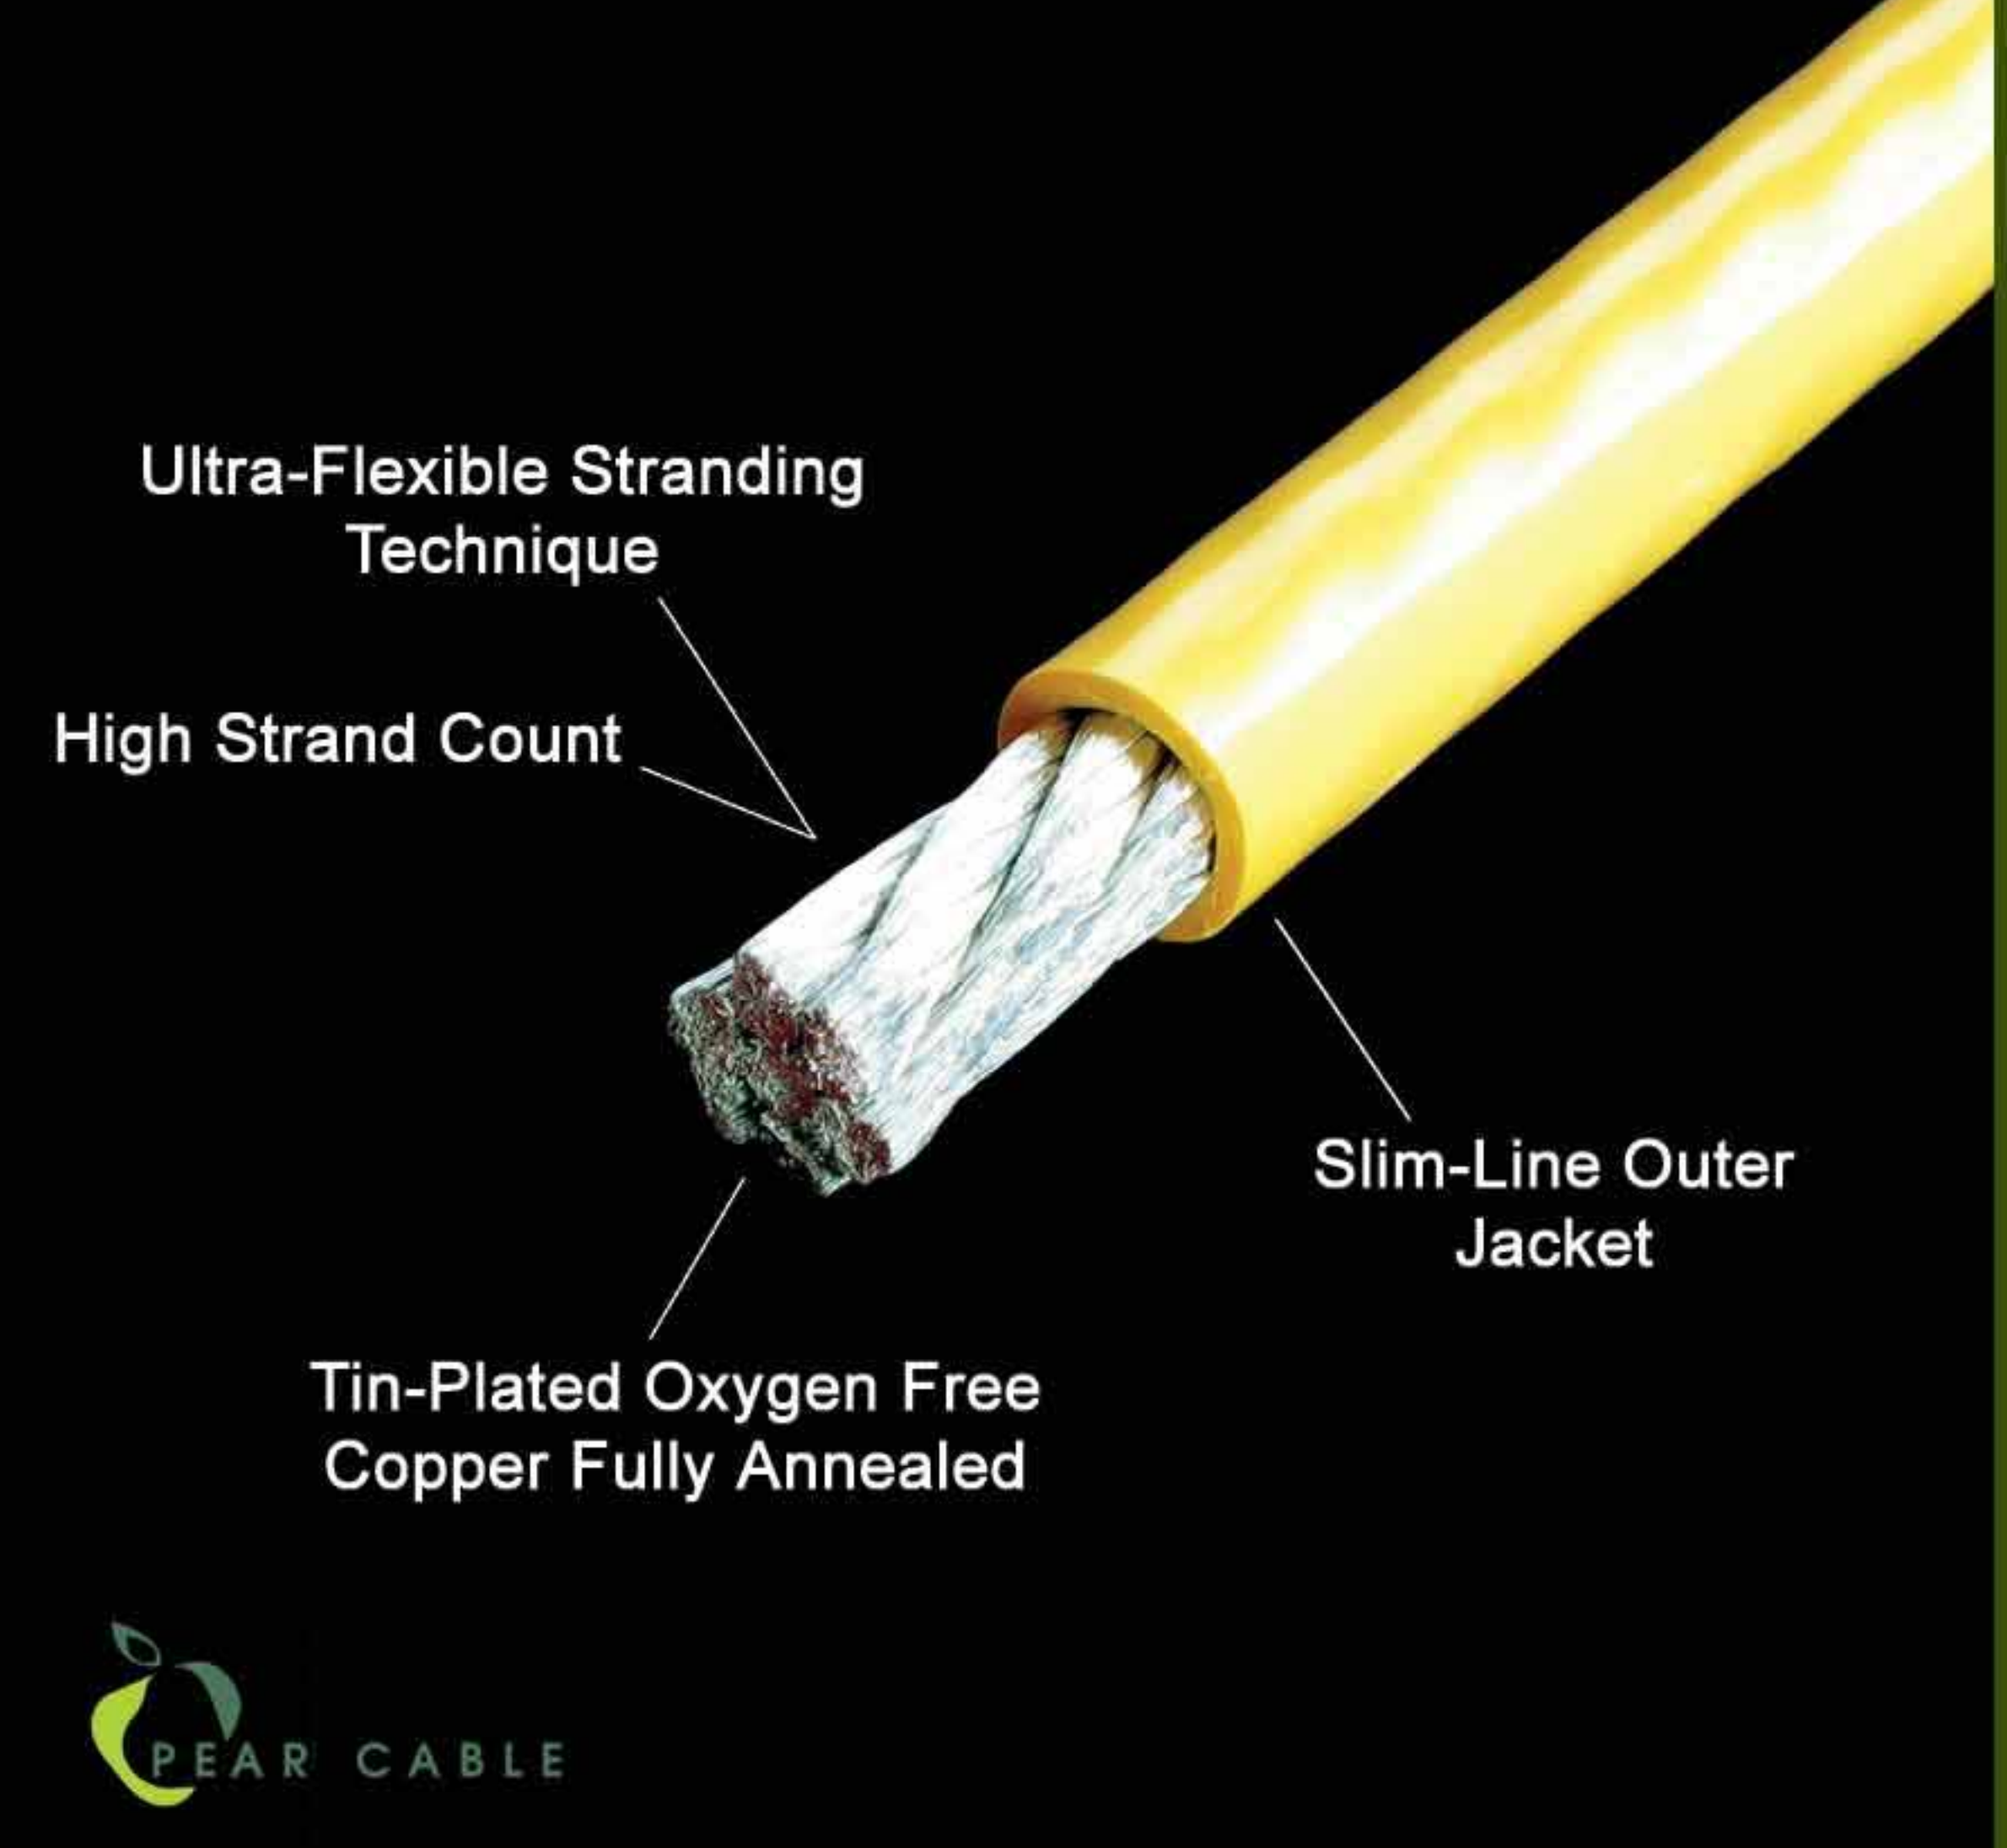

COMICE SPEAKER CABLE

COMICE POWER CABLE

Designed and built to last, you will not find a higher quality power cable than the Comice Power Cable. The slim-line jacket and high strand-count copper make it ultra-flexible and thinner than most competing cables. Tin-plated copper and a tough outer jacket that can withstand more than 600 Volts at 105 degrees Celsius, allow this cable to function perfectly under the hood of your vehicle. Available in 8 AWG, 4 AWG, and 1/0 AWG, these cables let your amplifiers get the power that they need.
